

Open Fellowship Position

Montefiore Medical Center has an unanticipated opening in our Pediatric Infectious Diseases fellowship program for a first-year fellow starting July 2020 at the Children's Hospital at Montefiore, Bronx, NY (see cham.org). Our fellowship in Pediatric Infectious Diseases is a 3-year ACGME accredited program offered by the Department of Pediatrics of the Albert Einstein College of Medicine. Our faculty consists of Pediatric Infectious Disease specialists with a range of clinical and research interests. This goal of our 3-year training program is to prepare participants for an academic career in pediatric infectious diseases.

The main focus of the first year is clinical training. Six months are spent on the pediatric infectious diseases consultation service, one month on the adult infectious diseases consultation service, one month in the Clinical Microbiology Lab, 2 months in research and one month in a variety of infectious diseases outpatient settings. I.D. fellows attend a weekly afternoon Pediatric I.D. Clinic (approximately 60 patients/ month). The fellow supervises one or more pediatric residents and 4th year medical students. There is a Pediatric Infectious Diseases Clinic that meets one afternoon per week and sees about 40 patients per month including hospital discharges, new outpatient consults, travel medicine patients, and others. The Pediatric I.D. Service is closely allied with the Adult I.D. Service; in the first year of training, the Pediatric I.D. fellow rotates for one month on the adult service while the adult fellows rotate throughout the year on the Pediatric I.D. service.

The main focus of the second and third years is research. Ten to eleven months of each year are spent doing research. Fellows are able to choose their research projects from a wide range of basic and clinical activities at the medical school and CHAM. Together with the fellowship director fellows choose their research project in the first year. Fellows may choose from any of the appropriate laboratories at the medical school and are not restricted to working with the division of Pediatric Infectious Diseases program.

Interested applicants, please contact David L. Goldman (dagoldma@montefiore.org).
