

April 15, 2020

The Pediatric Infectious Diseases Fellowship at The University of Chicago Comer Children's Hospital has an opening for a fellow beginning July 1, 2020. Our training program is a three-year ACGME accredited program and upon graduation, fellows are poised to assume a role in an academic, clinical, or basic research field depending on their interests. Our program provides rigorous exposure to an extremely diverse and medically complex patient population at Comer Children's Hospital in addition to myriad research opportunities both inside the Section of Pediatric Infectious Diseases and at The University of Chicago at large.

Academic and research areas of interest include but are not limited to infection prevention, antimicrobial stewardship, quality improvement, medical education, pediatric/adolescent HIV, transplant ID, Hepatitis C, basic science and translational projects related to toxoplasmosis infection, and human microbiome research. Fellows are also given the opportunity to gain outpatient exposure via participation in a variety of clinical settings to include general pediatric ID clinic at Comer Children's, a federally qualified health center focused on HIV infection/prevention, travel clinic, and a community-wide immunization program. A unique Pediatric Transplant ID elective rotation is also offered as an opportunity for fellows to gain more in-depth exposure to the management of infectious conditions in children who are undergoing bone marrow or solid organ transplantation.

You can learn more about our program at: <https://pediatrics.uchicago.edu/education/id-fellowship>

Interested candidates should contact:

Julia C. Rosebush, DO, FAAP
Assistant Professor, Pediatric Infectious Diseases
Program Director, Pediatric ID Fellowship
