The Pediatric Infectious Diseases Fellowship Training Program at the Children's Hospital of Philadelphia (CHOP) provides pediatricians who have completed residency training with a three-year educational experience to allow them to pursue a career in pediatric infectious diseases. Specifically, this program is designed to:

- Expand the trainee's medical knowledge of the pathogenesis and appropriate treatment of pediatric infectious diseases
- Augment the trainee's clinical skills in the accurate diagnosis and management of infectious diseases; and
- Provide training in either clinical epidemiology, laboratory-based, or translational based investigations related to pediatric infectious diseases.

Our mission is to prepare individuals to excel as future leaders in the field of Pediatric Infectious Diseases. Our 3-year fellowship is designed to provide fellows with a broad array of training opportunities in clinical infectious diseases, bench research, clinical epidemiology, antimicrobial stewardship, infection prevention and control, and global health, all in a diverse, inclusive, and collegial environment.
