

Fellowship Post – Indiana University, Riley Hospital for Children

Institution/Fellowship Program: Indiana University / Riley Hospital for Children

Posting expiration date: 12-31-2024

Website: <https://medicine.iu.edu/pediatrics/specialties/infectious-diseases/fellowship>

Brief description of the position

The Ryan White Center for Pediatric Infectious Diseases and Global Health at Indiana University School of Medicine has an open fellowship position available for July 2024.

The IUSM Pediatric Infectious Diseases and Global Health Fellowship is a three-year program for physicians interested in a career in academic pediatric infectious diseases. The fellowship offers outstanding clinical training at Riley Hospital for Children, one of the nation's top-ranked children's hospitals, with exposure to a wide variety of clinical infectious diseases and exceptional research opportunities. With 27 faculty members in our division including physicians, pharmacists, physician assistants and PhD researchers, we are one of the nation's leading research programs in pediatric infectious diseases. Our goal is to improve the health of children in Indiana and around the world through outstanding training in pediatric disease research and clinical care.

Clinical Training. Our fellowship program consists of 52 weeks of clinical training, divided between a primary ID and Immunocompromised ID service. Fellows learn from over 4,000 inpatient and outpatient clinical encounters of complex infectious diseases each year supervised by 12 dedicated and enthusiastic pediatric ID physicians. The educational curriculum covers diverse infectious diseases topics including microbiology, infection prevention and antimicrobial stewardship, epidemiology, global health and clinical pharmacology.

Research. Two years of fellowship are dedicated to research. We have nationally recognized faculty mentors in clinical, translational and implementation research and the Herman B Wells Center for Pediatric Research adjacent to our hospital, a leading center for NIH-funded pediatric research.

- **Global Health.** Research areas include malaria, HIV, MTb, antimicrobial stewardship, implementation science and microbiome research. Our faculty have established research sites in Kenya and Uganda. Fellows have opportunities to work with AMPATH, a collaboration between IU and Moi University in Eldoret, Kenya.
- **Clinical Research.** Local researchers in MRSA, Kawasaki Disease, antimicrobial and diagnostic stewardship.
- **Mentorship** is also available through in the broader academic community in the Departments of Medicine, Microbiology and Immunology at IU School of Medicine.

Additional educational opportunities supported through our program

- Master of Science in Clinical Research through the IU CTSI
- Clinical Tropical Medicine and Travelers Health Certificate program offered by ASTMH.

Prerequisite qualifications

Completion of a 3-year ACGME accredited Residency program

Potential for J-1 Waiver Eligibility: Yes
